# TRAINING AND DIALOGUE PROGRAMS

This information pertains to one of the Training and Dialogue Programs of the Japan International Cooperation Agency (JICA), which shall be implemented as part of the Official Development Assistance of the Government of Japan based on bilateral agreement between the Governments of recipient country and Japan.

## **1. Concept**

### **Background**

There is a growing global awareness of the importance of forest conservation; however, there are still many issues to be solved in practical terms. It is important to promote forest conservation correlating with human activities, with the emphasis on coexistence between human beings and forests. In Japan, we have had a long and close relationship with forests, which brings us various benefits like various forest products, preventing natural disasters, conserving watershed, and so forth.

In recent years, a wide variety of efforts have been made in various regions like introducing volunteer activities for forest conservation with the aim of collaboration between forest areas in upper streams and those in lower reaches. In addition, scientific knowledge on the roles played by forests to improve global warming, attributable to human activities and water shortage, has been accumulated sufficiently.

### **For what?**

This program is designed to develop capacity to carry out forest conservation through a variety of activities based on community participation.

### **For whom?**

This program is offered to government officers engaged in the field of forest management.

### **How?**

The program consists of lectures and field visits at organizations and institutes in Hokkaido prefecture, lectures at central administrative agencies and at the central research institutes, and on-site inspection tours outside Hokkaido.

## ***For Your Reference***

### **JICA and Capacity Development**

The key concept underpinning JICA operations since its establishment in 1974 has been the conviction that "capacity development" is central to the socioeconomic development of any country, regardless of the specific operational scheme one may be undertaking, i.e. expert assignments, development projects, development study projects, training programs, JOCV programs, etc.

Within this wide range of programs, the Training and Dialogue Programs have long occupied an important place in JICA operations. Conducted in Japan, they provide partner countries with opportunities to acquire practical knowledge accumulated in Japanese society. Participants dispatched by partner countries might find useful knowledge and re-create their own knowledge for enhancement of their own capacity or that of the organization and society to which they belong.

About 460 pre-organized programs cover a wide range of professional fields, ranging from education, health, infrastructure, energy, trade and finance, to agriculture, rural development, gender mainstreaming, and environmental protection. A variety of programs are being customized to address the specific needs of different target organizations, such as policy-making organizations, service provision organizations, as well as research and academic institutions. Some programs are organized to target a certain group of countries with similar developmental challenges.

### **Japanese Development Experience**

Japan was the first non-Western country to successfully modernize its society and industrialize its economy. At the core of this process, which started more than 140 years ago, was the "adopt and adapt" concept by which a wide range of appropriate skills and knowledge have been imported from developed countries; these skills and knowledge have been adapted and/or improved using local skills, knowledge and initiatives. They finally became internalized in Japanese society to suit its local needs and conditions.

From engineering technology to production management methods, most of the know-how that has enabled Japan to become what it is today has emanated from this "adoption and adaptation" process, which, of course, has been accompanied by countless failures and errors behind the success stories. We presume that such experiences, both successful and unsuccessful, will be useful to our partners who are trying to address the challenges currently faced by developing countries.

However, it is rather challenging to share with our partners this whole body of Japan's developmental experience. This difficulty has to do, in part, with the challenge of explaining a body of "tacit knowledge," a type of knowledge that cannot fully be expressed in words or numbers. Adding to this difficulty are the social and cultural systems of Japan that vastly differ from those of other Western industrialized countries, and hence still remain unfamiliar to many partner countries. Simply stated, coming to Japan might be one way of overcoming such a cultural gap.

JICA, therefore, would like to invite as many leaders of partner countries as possible to come and visit us, to mingle with the Japanese people, and witness the advantages as well as the disadvantages of Japanese systems, so that integration of their findings might help them reach their developmental objectives.
