VI. ANNEX:

Strategic Port Management (JFY 2012)

Country Report

All the applicants are required to prepare the Country Report providing information on the following items and subjects. The draft action plan should be directly related to your activities, because the action plan should be mainly implemented by yourself and your office. The Country Report has to be typewritten in English, less than 5 pages (12-point font, double-spaced, A4 size paper). In addition to the Country Report, please fill out Attached-1 and 2 to describe general information of your country as reference information of the Country Report.

- 1. Front Page
 - (1) Title of the country report
 - (2) Country
 - (3) Name of applicant
- 2. Contents of Country Report
 - (1) Position of applicant and name of organization
 - (2) Problem Areas

Describe the most crucial problem of port management and operation with which the applicants' organizations or countries are faced and the measures being taken to cope with it.

(3) Draft Action plan

Describe an idea of action plan to solve or alleviate the problems/constraints

- 1) Name of the plan
- 2) Purpose of the plan
- 3) Period of the plan
- 4) Main activities
- 5) Estimating negative impact

Note:

- (1) Participants of the training are encouraged to bring photos that describe your idea of action plan (If you don't have any, please take some before coming to Japan. It will be helpful for you so as to have image of the port of your country.), to support their Country Report and Action plan presentation.
- (2) The program offers participants the opportunity for solving real problems with knowledge from the training. In this connection, the training emphasis is on the rational design and preparation of action plan by training participants. The below shows the steps followed by the participants to create real outputs.
 - Draft Action plan (pre-departure, in home country)

To analyze the problems on target area in your organization for formulating best action plan. The draft action plan prepared by the participant is considered as the starting point and needs the detailed preparation before leaving their home countries.

- Revised Action Plan

Draft action plan will be refined as a revised action plan based on information and knowledge gained from the lectures, workshops, case studies and site visits.

- Follow up

The revised action plan is considered as containing important knowledge and information for the potential development of new projects. Participants is required to present it to your office and finalize the action plan incorporating the comments and feedbacks of your office on your action plan, which may be developed into a project proposal as a basis of our future cooperation. After the finalization of action plan, the participants are also required to submit it to your organization and JICA Center through the JICA office or Embassy of Japan of the respective country.

(3) Those who are informed of acceptance to participate in the course will be requested to make an approximately twenty (20) minute presentation of their country reports during the comparative study session of the course. The presentation should be focused on the problems of port management and operation and draft action plan. Participants are encouraged to use visual aids, such as overhead projectors, videos, slides, pictures, etc. for the presentation. Equipment for such visual aids (e.g. an OHP, video player, slide projector and MS power point) is available at the seminar room.

1. General Information on Ports in the Country

Please fill in the form with the latest information.

JICA and Capacity Development

The key concept underpinning JICA operations since its establishment in 1974 has been the conviction that "capacity development" is central to the socioeconomic development of any country, regardless of the specific operational scheme one may be undertaking, i.e. expert assignments, development projects, development study projects, training programs, JOCV programs, etc.

Within this wide range of programs, Training Programs have long occupied an important place in JICA operations. Conducted in Japan, they provide partner countries with opportunities to acquire practical knowledge accumulated in Japanese society. Participants dispatched by partner countries might find useful knowledge and re-create their own knowledge for enhancement of their own capacity or that of the organization and society to which they belong.

About 460 pre-organized programs cover a wide range of professional fields, ranging from education, health, infrastructure, energy, trade and finance, to agriculture, rural development, gender mainstreaming, and environmental protection. A variety of programs and are being customized to address the specific needs of different target organizations, such as policy-making organizations, service provision organizations, as well as research and academic institutions. Some programs are organized to target a certain group of countries with similar developmental challenges.

Japanese Development Experience

Japan was the first non-Western country to successfully modernize its society and industrialize its economy. At the core of this process, which started more than 140 years ago, was the "adopt and adapt" concept by which a wide range of appropriate skills and knowledge have been imported from developed countries; these skills and knowledge have been adapted and/or improved using local skills, knowledge and initiatives. They finally became internalized in Japanese society to suit its local needs and conditions.

From engineering technology to production management methods, most of the know-how that has enabled Japan to become what it is today has emanated from this "adoption and adaptation" process, which, of course, has been accompanied by countless failures and errors behind the success stories. We presume that such experiences, both successful and unsuccessful, will be useful to our partners who are trying to address the challenges currently faced by developing countries.

However, it is rather challenging to share with our partners this whole body of Japan's developmental experience. This difficulty has to do, in part, with the challenge of explaining a body of "tacit knowledge," a type of knowledge that cannot fully be expressed in words or numbers. Adding to this difficulty are the social and cultural systems of Japan that vastly differ from those of other Western industrialized countries, and hence still remain unfamiliar to many partner countries. Simply stated, coming to Japan might be one way of overcoming such a cultural gap.

JICA, therefore, would like to invite as many leaders of partner countries as possible to come and visit us, to mingle with the Japanese people, and witness the advantages as well as the disadvantages of Japanese systems, so that integration of their findings might help them reach their developmental objectives.

CORRESPONDENCE
