Knowledge Co-Creation Program (Group & Region Focus)

General information on

Evidence-Based Public Health Planning (Online)

課題別研修「エビデンスに基づく公衆衛生計画立案」(遠隔)

JFY 2021

Course No. 202002990J001

Online Program Period: From November 8, 2021 to December 17, 2021

This information pertains to one of the JICA Knowledge Co-Creation Programs (Group & Region Focus) of the Japan International Cooperation Agency (JICA) implemented as part of the Official Development Assistance of the Government of Japan based on bilateral agreement between both Governments.

JICA Knowledge Co-Creation Program (KCCP)

The Japanese Cabinet released the Development Cooperation Charter in February 2015, which stated, *“In its development cooperation, Japan has maintained the spirit of jointly creating things that suit partner countries while respecting ownership, intentions and intrinsic characteristics of the country concerned based on a field-oriented approach through dialogue and collaboration. It has also maintained the approach of building reciprocal relationships with developing countries in which both sides learn from each other and grow and develop together.”* JICA believes that this ‘Knowledge Co-Creation Program’ will serve as a foundation of mutual learning process.

I. Concept

Background

In recent years there has been growing recognition of the importance of developing Evidence-Based Public Health and Evidence-Based Health Policy, following the examples of Evidence-Based Medicine. Health planners and policy makers, including those from low- and middle-income countries, can make good use of Evidence-Based Public Health approaches and of tools and techniques used in them.

Okinawa Prefecture is located south-west of Japan and can show progress in health since 1940's. Okinawa belongs to subtropical climate region, and has insular geography and historical experience of postwar construction. Although Okinawa is economically behind other Japanese prefectures, Okinawa once was the best prefecture in longevity. Lessons learned for Okinawa's public health and primary health care model will be shared in this program.

In Japanese fiscal year 2021, this program is conducted "online" by the use of video materials and live sessions.

For what?

This program is designed to help participants and their agencies introduce and use evidence-based approaches, with quantitative and qualitative analysis, in health planning and health policy development.

For whom?

This program is designed for health administrators and health officials who are responsible for health policy making at the central or local government level.

How?

By online program, the participants shall have opportunities:

- 1) to gain additional knowledge and skills to analyze their own countries' situations, challenges and options and to apply what they find relevant from lessons learned in the program,
- 2) to obtain the clues to improve their current situation through learning the experience of measures taken in Okinawa Prefecture, which is one of the local government located southernmost in Japan, on its health administration especially just after the WW II, and
- 3) to develop a plan on public health issues for feasible application, back in his or her home country, incorporating what each considers the most important and job-relevant things learned in the program.

Examples, case studies and exercises will highlight Okinawa's experience and the multiple and varied challenges Japan and other countries face today.

Special attention will be given to the challenges faced by low- and middle-income countries.

For Your Reference

JICA and Capacity Development

Technical cooperation is people-to-people cooperation that supports partner countries in enhancing their comprehensive capacities to address development challenges by their own efforts. Instead of applying Japanese technology per se to partner countries, JICA's technical cooperation provides solutions that best fit their needs by working with people living there. In the process, consideration is given to factors such as their regional characteristics, historical background, and languages. JICA does not limit its technical cooperation to human resources development; it offers multi-tiered assistance that also involves organizational strengthening, policy formulation, and institution building.

Implementation methods of JICA's technical cooperation can be divided into two approaches. One is overseas cooperation by dispatching experts and volunteers in various development sectors to partner countries; the other is domestic cooperation by inviting participants from developing countries to Japan. The latter method is the Knowledge Co-Creation Program, formerly called Training Program, and it is one of the core programs carried out in Japan. By inviting officials from partner countries and with cooperation from domestic partners, the Knowledge Co-Creation Program provides technical knowledge and practical solutions for development issues in participating countries.

The Knowledge Co-Creation Program (Group & Region Focus) has long occupied an important place in JICA operations. About 400 pre-organized courses cover a wide range of professional fields, ranging from education, health, infrastructure, energy, trade and finance, to agriculture, rural development, gender mainstreaming, and environmental protection. A variety of programs is being customized by the different target organizations to address the specific needs, such as policy-making organizations, service provision organizations, as well as research and academic institutions. Some programs are organized to target a certain group of countries with similar developmental challenges.

Japanese Development Experience

Japan, as the first non-Western nation to become a developed country, built itself into a country that is free, peaceful, prosperous and democratic while preserving its tradition. Japan will serve as one of the best examples for our partner countries to follow in their own development.

From engineering technology to production management methods, most of the know-how that has enabled Japan to become what it is today has emanated, of course, has been accompanied by countless failures and errors behind the success stories.

Through Japan's progressive adaptation and application of systems, methods and technologies from the West in a way that is suited to its own circumstances, Japan has developed a storehouse of knowledge not found elsewhere from unique systems of

organization, administration and personnel management to such social systems as the livelihood improvement approach and governmental organization. It is not easy to apply such experiences to other countries where the circumstances differ, but the experiences can provide ideas and clues useful when devising measures to solve problems.

JICA, therefore, would like to invite as many leaders of partner countries as possible to come and visit us, to mingle with the Japanese people, and witness the advantages as well as the disadvantages of Japanese systems, so that integration of their findings might help them reach their developmental objectives.
